

```
fc::get_typename< std  
::map< K, V > >::name
```

The diagram illustrates a transformation from a C++ template expression to a static member function call. A grey box on the left contains the template expression `fc::get_typename< std::map< K, V > >::name`. A blue arrow points from this box to a white box on the right containing the static member function call `fc::get_typename::name`. A curved blue arrow above the white box indicates a self-loop or a continuation of the process.

```
fc::get_typename::name
```
