

cpp.ast.Class.IsDefinition

cpp.ast.Class.IsExportable

cpp.ast.Node.IsDeclaration

```
graph LR; A[cpp.ast.Class.IsDefinition] --> C[cpp.ast.Node.IsDeclaration]; B[cpp.ast.Class.IsExportable] --> C;
```

The diagram illustrates a relationship between three AST node types. On the left, two white rectangular boxes are stacked vertically. The top box contains the text 'cpp.ast.Class.IsDefinition' and the bottom box contains 'cpp.ast.Class.IsExportable'. On the right, a gray rectangular box contains the text 'cpp.ast.Node.IsDeclaration'. Two blue arrows point from the right side of the left boxes to the left side of the gray box, indicating that both 'IsDefinition' and 'IsExportable' are subclasses or components that inherit the 'IsDeclaration' property.
