

fc::sha3_impl::finalize

fc::sha3_impl::update

fc::sha3_impl::update_step

```
graph LR; A[fc::sha3_impl::finalize] --> C[fc::sha3_impl::update_step]; B[fc::sha3_impl::update] --> C;
```

The diagram illustrates a functional dependency where two public methods, `finalize` and `update`, both rely on a common internal method, `update_step`. The `finalize` and `update` boxes are white with black borders, while the `update_step` box is gray with a black border. Blue arrows indicate the direction of the dependency from the left boxes to the right box.
