

foo::PrintTo

```
graph LR; A[foo::PrintTo] --> B["foo::PrintableViaPrintTo<br>Template::value"]
```

The diagram illustrates a function call resolution. On the left, a white box with a black border contains the text 'foo::PrintTo'. A blue arrow points from this box to a larger gray box on the right. The gray box contains the text 'foo::PrintableViaPrintTo' on the top line and 'Template::value' on the bottom line. This represents the mapping from a function name to its implementation in a template-based language like C++.

foo::PrintableViaPrintTo
Template::value
