

testing::internal::  
CmpHelperSTREQ

testing::internal::  
CmpHelperSTRNE

testing::internal::  
String::WideCStringEquals

```
graph LR; A[testing::internal::CmpHelperSTREQ] --> C[testing::internal::String::WideCStringEquals]; B[testing::internal::CmpHelperSTRNE] --> C;
```

The diagram illustrates a mapping from two source functions to a target function. On the left, two white boxes with black borders contain the names of the source functions: 'testing::internal::CmpHelperSTREQ' (top) and 'testing::internal::CmpHelperSTRNE' (bottom). On the right, a gray box with a black border contains the name of the target function: 'testing::internal::String::WideCStringEquals'. Two blue arrows originate from the right side of the source boxes and point towards the left side of the target box, indicating that both source functions are mapped to or implemented by the target function.
