

fc::bloom_filter::contains

```
graph LR; A[fc::bloom_filter::contains] --> B[fc::bloom_filter::compute_indices]; A --> C[fc::bloom_filter::hash_ap];
```

The diagram illustrates the internal logic of the `fc::bloom_filter::contains` function. It is represented by a grey rectangular box on the left. Two blue arrows originate from the right side of this box, pointing to two separate white rectangular boxes on the right. The top arrow points to a box containing the text `fc::bloom_filter::compute_indices`, and the bottom arrow points to a box containing the text `fc::bloom_filter::hash_ap`. This indicates that the `contains` function internally calls both `compute_indices` and `hash_ap` to perform its operation.

fc::bloom_filter::compute
_indices

fc::bloom_filter::hash_ap
