

Catch::TeamCityReporter
::testCaseStarting

Catch::XmlReporter
::testCaseStarting

Catch::StreamingReporter
Base::testCaseStarting

```
graph LR; A[Catch::TeamCityReporter::testCaseStarting] --> C[Catch::StreamingReporterBase::testCaseStarting]; B[Catch::XmlReporter::testCaseStarting] --> C;
```

The diagram illustrates a relationship between three code snippets. On the left, there are two white rectangular boxes. The top box contains the text 'Catch::TeamCityReporter::testCaseStarting' and the bottom box contains 'Catch::XmlReporter::testCaseStarting'. On the right, there is a single gray rectangular box containing 'Catch::StreamingReporterBase::testCaseStarting'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both 'TeamCityReporter' and 'XmlReporter' inherit from or utilize the 'testCaseStarting' method of the 'StreamingReporterBase'.
