

sysio::chain\_apis::  
read\_write::push\_transaction

sysio::chain\_apis::  
read\_write::send\_transaction

sysio::chain::controller  
::to\_variant\_with\_abi

```
graph LR; A["sysio::chain_apis::read_write::push_transaction"] --> C["sysio::chain::controller::to_variant_with_abi"]; B["sysio::chain_apis::read_write::send_transaction"] --> C;
```

The diagram illustrates a mapping from two different API functions to a single controller function. On the left, there are two white rectangular boxes. The top box contains the text 'sysio::chain\_apis::read\_write::push\_transaction' and the bottom box contains 'sysio::chain\_apis::read\_write::send\_transaction'. On the right, there is a gray rectangular box containing the text 'sysio::chain::controller::to\_variant\_with\_abi'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both API functions are implemented by or mapped to the controller's 'to\_variant\_with\_abi' method.
