

testing::Message::operator<<

testing::Message::operator<<

testing::internal::
String::ShowWideCString

```
graph LR; A[testing::Message::operator<<] --> C[testing::internal::String::ShowWideCString]; B[testing::Message::operator<<] --> C;
```

The diagram illustrates a shared implementation for the `testing::Message::operator<<` function. Two separate boxes on the left, each containing the text `testing::Message::operator<<`, have blue arrows pointing to a single box on the right. The box on the right is shaded gray and contains the text `testing::internal::String::ShowWideCString`, indicating that both operator calls are resolved to this internal function.
